1. Plant No 230 was southeast of Molotov (58°01'N/56°15'E) on the road to Sverdlovsk (56°51'N/60°14'E). (1) The plant was composed of four workshops, each equipped with about 20 lathes and grinding machines for the manufacture of fuzes, and two shops for the manufacture of phonographs. (4) Some of the buildings were wooden structures, others were brick buildings with shingle roofs.
2. The plant produced both time fuzes and percussion fuzes from 3 to 12 cm in diameter. (3) The fuzes were dipped into stearin, and then packed into wooden boxes, 40 x 30 x 20 cm and 100 x 60 x 40 cm. A 60-ton railroad car could carry 40 large and 220 small boxes. An average of 12 to 15 railroad cars left the plant every month. From time to time fuzes were trucked to Gun Factory No 172. The number of workers was not determined. Temporarily 60 PWs were employed there. Work was done in three shifts. (1)

25X1A

Comment.

- (1) For sketch indicating the location of the plant, see Annex 1.
- (2) For layout sketch, see Annex 2, sketch 1.
- (3) For diagrams of the fuzes, see Annex 2, sketch 2.
- (4) The plant was previously reported as being located in the neighborhood of the aircraft plant. The present report furnishes the first description of its layout and production. According to wartime information, a Fuze Plant No 200 was transferred from Vladimir (56°10'N/40°25'E) to Molotov and allegedly installed in the Dzerzhinski Machine Plant No 10. From the present report it appears more probable that Plant No 230 and Plant No 200 are identical and that the fuze factory was installed in the phonograph factory immediately after being removed from Vladimir.

2 Annexes: 2 Sketches and one diagram.
